LAB SESSION 01: Project Selection and Team Formation
Theme: Hostel Management System

1. Team Member List & Roles

- **Product Owner: Harsh Parmar(24BCB041)** (Decides feature priorities, coordinates with hostel staff, and defines rules for leave approvals).
- **Scrum Master: Yash Vaghani(24BCB044), Harsh Parmar(24BCB044)** (Manages the task board, tracks development progress, and clears work blocks).
- **Developers: Yash Vaghani (24BCB044)** (Handles database architecture, user authentication, and web interface design).

2. Project Abstract:

The Hostel Management System is a web platform built to handle everyday hostel tasks without relying on paper registers. Tracking room allocations, approving out-passes, and filing complaints manually often causes delays. The platform provides separate access portals for students, wardens, and administrators. Students can check room details, submit leave requests, report maintenance issues with photos, and view the daily mess menu. Wardens can review out-pass applications and track room occupancy, while administrators oversee system settings and reports.

3. Questionnaire (Asked to Client)

1. Should wardens assign rooms manually, or should the system assign them automatically based on available beds?
2. If a student wants to go out during late-night curfew hours, should they need special approval?
3. How will wardens take daily attendance—using portal entries or scanning student ID cards?
4. Can students view the contact details or names of their assigned roommates on their profile page?
5. What happens if a repair complaint is not updated or resolved within 48 hours?

6. Does the admin page need a built-in payment link or gateway to track hostel fees?
7. Can students give star ratings or feedback on the daily mess food through the portal?
8. Are students allowed to edit an out-pass request after it has been submitted for approval?
9. What specific monthly reports does the admin need to see (e.g., total complaints, fee dues, attendance)?
10. What security measures are needed to ensure students cannot access warden or admin pages?

4. Task Board Screenshot (Simulation)

- **Backlog:** Secure Login Routing, Mess Food Rating Module, Admin Fee Dashboard, Automated Late Notice Alerts.
- **In Progress:** Database Setup, Out-Pass Request Form Design.
- **Testing:** Room Assignment Logic Check.
- **Done:** Project Abstract and Client Requirements Questionnaire.
